

How to Remove Viruses From Your Computer

Sophos Anti-Virus is available free of charge to all University of Arizona Faculty, Staff and Students from <http://sitelicense.arizona.edu/sophos>.

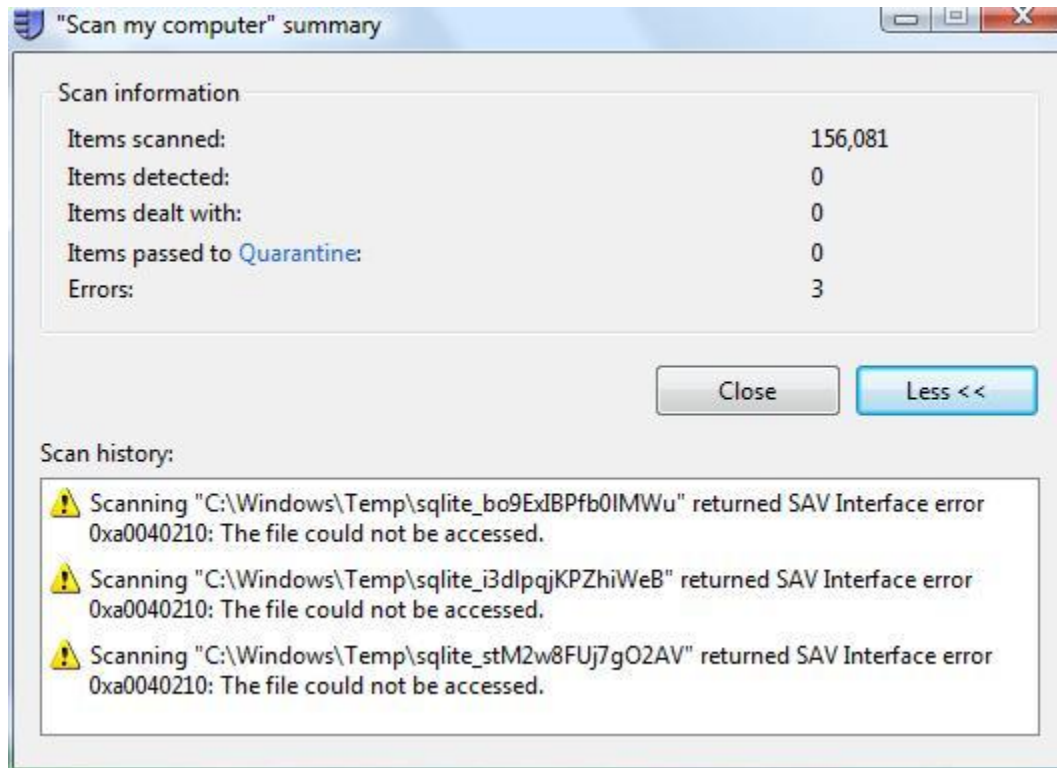

1. Open Sophos Anti-Virus.

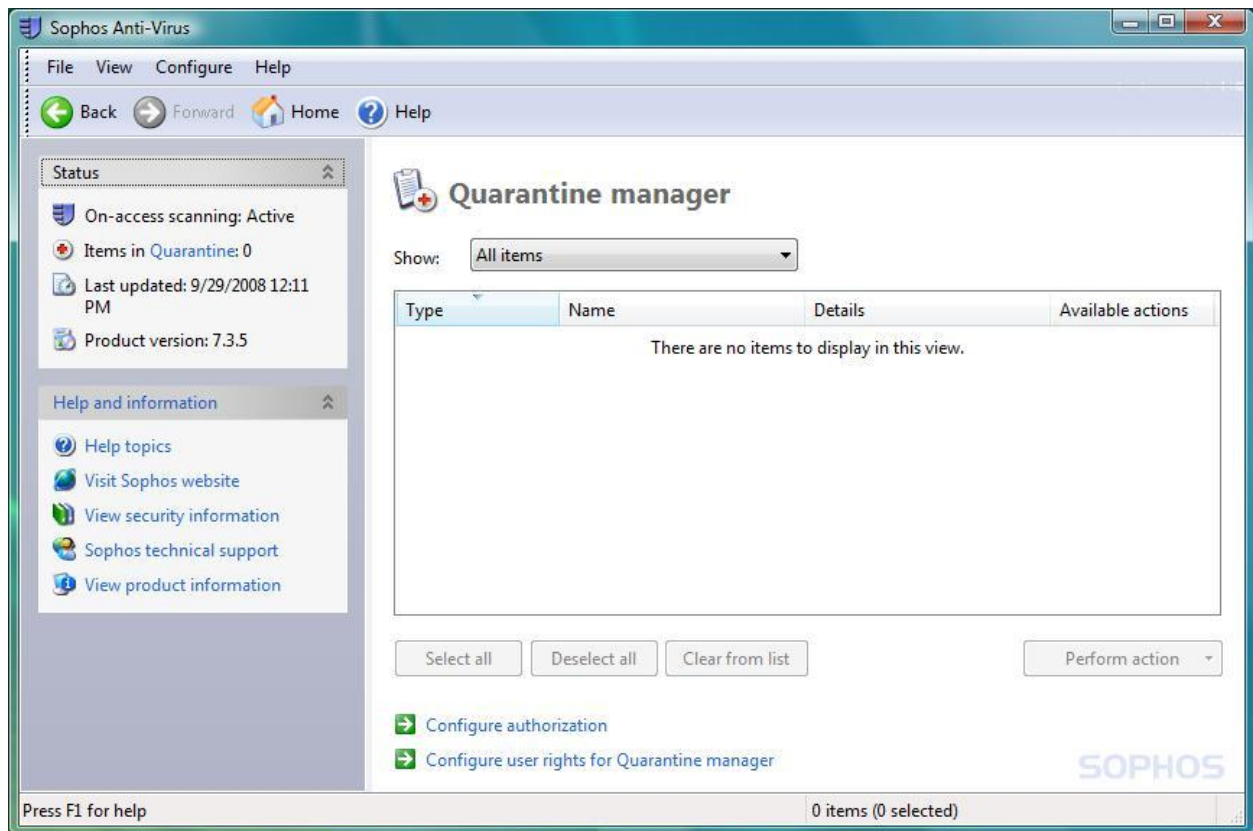

2. Click on the **Scan my computer** button.

3. Sophos will now scan your computer for viruses.

4. Once the scan is complete you will be presented with a summary. If Sophos detects any viruses or threats, the summary will let you know how they were dealt with (either removed or passed to Quarantine). Should anything be sent to Quarantine you will need to manually delete the infected files from your computer. To do this, click on the **Quarantine** link.

In the Quarantine Manager, click the **Select all** button and choose the **Delete** option from the **Perform Action** drop-down menu in the lower right-hand corner of the window. Once all files have been removed from the Quarantine Manager you can close Sophos.
